## PREFACE

Indonesian Fisheries Research Journal Volume 15 Number 2 December 2009 is the second scientific journal published by Research Center for Capture Fisheries in 2009. The next publication of this journal will be at Juni 2010. This journal is hopefully useful particularly for scientists as a media of their communication related to fish and fisheries in inland waters as well as marine. This journal is funded by the Research Center for Capture Fisheries, F.Y. 2009.

Green turtle (*Chelonia mydas*) and olive ridley (*Lepidochelys olivacea*) as endangerous species in the world are discussed in this jurnal. Fisheries management plays an important role to maintain population and fish stock for sustainable fisheries. This requires data and information such as population parameters of fish and stock management focusing on a particular object of endeavour shrimp (*Metapenaeus ensis*) and red snapper. Increasing add value of fisheries products is a point of interest of fisheries development. One of the method is inhibiting the growth of fish spoilage bacteria as discussed in this journal.

We would like to thanks to the referees for their contribution in reviewing and correcting the manuscripts.

Editor
